

01 SUMMARY

- **7+ years building Unity 3D (C#) game clients** for top-tier commercial mobile titles, with shipped credits on **Langrisser Mobile** and **Second Galaxy**.
- Deep expertise in **mobile client performance** — DrawCall reduction, GC and memory control, object pooling, and stable frame-rates across devices.
- Experienced with **C# hot-update via HybridCLR** for over-the-air code delivery, and shipping complex gameplay systems on long-running live ops.
- Cross-language engineer (C# / Python / C++) who builds editor tools and asset pipelines to streamline multi-developer workflows.

02 SKILLS

ENGINE / LANG	Unity 3D · C# · C++ · Python
MOBILE PERF	DrawCall reduction · GC & memory control · object pooling · frame-rate stability on device · long-list rendering · Unity Profiler · Frame Debugger
CLIENT / UI	UGUI internals · state-machine mgmt · Prefab architecture · complex UI flows & dialog systems
PIPELINE / TOOLING	HybridCLR hot-update (OTA) · custom editor tools · asset pipeline & serialization · Excel→JSON automation · Git
AI-ASSISTED DEV	Claude Code · Codex · Antigravity · MCP tooling
ALGORITHMS / ETC	Machine Learning / CNN · CUDA · Caffe

03 EXPERIENCE

Zlongame · Blackjack Studio — Game Client Developer

May 2019 — Present

Langrisser Mobile TACTICAL RPG / SRPG IOS & ANDROID \$130M+ CN IOS

apps.apple.com/us/app/langrisser/id1435314243

- ◇ **Core gameplay systems:** Owned core modules (Battle Pass, Honor System, Peak Test dungeon) including logic for 10+ randomized events and complex UI state machines.
- ◇ **Hot-update / OTA:** Shipped OTA client logic updates via HybridCLR, enabling rapid code delivery without full app-store releases.
- ◇ **Dialog system rebuild:** Re-architected the effects-aware dialog system to eliminate content-related bugs, built on a high-reuse Prefab architecture.
- ◇ **Mobile performance:** Optimized long-list rendering (Peak Arena), restoring frame rate from ~10 fps drops to a stable 60 fps via DrawCall and GC optimizations (profiled with Unity Profiler / Frame Debugger).

Action JRPG REAL-TIME COMBAT PROTOTYPE

- ◇ **Combat UI & timing accuracy:** Built an object-pooled combat UI and damage-number system, ensuring frame-perfect sync with damage resolution through repeated refactors.
- ◇ **NavMesh customization:** Customized an open-source NavMesh generator into a dedicated pathfinding plugin for complex sloped terrain.
- ◇ **Editor tooling & audio:** Developed editor tools ('UI Layer Manager', 'Footstep Layer Editor') and an audio blending system for complex surface materials.

Second Galaxy SCI-FI MMO IOS & ANDROID ONBOARDING

secondgalaxy.zlongame.com/index_en.html

- ◇ **Frontend development:** Implemented frontend UI logic for the bounty system and leaderboards, quickly ramping up on a massive MMO codebase.

Wolf Smoke Studio — Client Core Developer (side project)

Dec 2022 — May 2023

- ◇ **0-to-1 architecture:** Built the core client architecture and game lifecycle from scratch for a story-driven RPG.
- ◇ **Resource pipeline:** Built an Excel→JSON automation tool for game data deserialization, significantly improving level design iteration.

China Pacific Insurance (CPIC) — Channel Account Manager (pre-game career)

Sep 2012 — Jun 2018

Self-taught CS while working full-time; earned an M.Eng. (Software Engineering, Fudan) and built C++ / Python & machine-learning project experience before moving into game development.

04 EDUCATION

Fudan University — M.Eng., Software Engineering

Sep 2015 — Jun 2018

Thesis: "Design and Implementation of an Anomaly Defect Recognition System for Rail Fasteners" (CNN / CUDA / Caffe)

Shanghai Maritime University — B.Mgmt., Management Science

Sep 2008 — Jun 2012
